

## Database access via smartphone

## How does it work ?

### Security Markings with QR codes.

All our markings are now available with QR Codes. This offers more data storage than standard linear barcodes, enabling any smartphone to become a simple and powerful tool to manage assets via the Euro-ID international database: [www.euro-id.com](http://www.euro-id.com)

### Simple access to information.

If a marked item is found, the information stored in the QR code can be read using any Smartphone. The finder will automatically be redirected to the International Recovery Service (IRS) where they will be able to access the information needed to link the found item to its rightful owner. It is also possible to contact us via the International free phone number or directly via the website.

### A secure dedicated application.

An application for all Mobile platforms is available to customers **free of charge**. By scanning the QR code on the security marking you can access an account in the International database and manage assets directly via a smartphone. Accounts in the database are protected, and both user name and password are required to gain access.

### Managing assets not featuring QR codes :

For customers with existing security markings without QR codes, it is still possible to manage the information registered in the database by entering the ID number manually.

## Features and benefits

- **Free of Charge**
- Combines Security and Asset management
- Data stored in the Cloud: **Access to data from anywhere**
- **Secure access:** Verisign Secured
- **Easy to use:** Works with any smartphone
